32 0032 1
33 0033 1 ABSTRACT:
34 0034 1
35 0035 1 This module contains routines which change a character string
36 0036 1 to a list of numbers and vice-versa.
37 0037 1
38 0038 1 ENVIRONMENT: VAX-11 User Mode
39 0039 1
40 0040 1 AUTHOR: John Sauter, CREATION DATE: 20-FEB-1979
41 0041 1
42 0042 1 MODIFIED BY:
43 0043 1
44 0044 1 1-001 - Original. JBS 20-FEB-1979
45 0045 1 1-002 - Track changes in the virtual array support code. JBS 03-APR-1979
46 0046 1 1-003 - Continue to track changes in the virtual array support
47 0047 1 code. JBS 04-APR-1979
48 0048 1 1-004 - Change OT$$S and LIB$$S to STR$. JBS 21-MAY-1979
49 0049 1 1-005 - Change the index parameters to BAS$FETCH_BFA and BAS$STORE_BFA
50 0050 1 from by reference to by value. JBS 01-JUN-1979
51 0051 1 1-006 - Use BAS$LNK. JBS 26-JUN-1979
52 0052 1 1-007 - Change call to STR$COPY. JBS 16-JUL-1979
53 0053 1 1-008 - BAS$CHANGE_S_NA must apply the double precision scale
54 0054 1 to double precision arrays, and BAS$CHANGE_NA_S must
55 0055 1 descale before converting to a string. PLC 22-May-1981
56 0056 1 1-009 - BAS$CHANGE_S_NA was erroneously calling BAS$FETCH_BFA to store
57 0057 1 a value in a 2 dim. array.
```

```
58 0058 1 | BASSCHANGE NA S was not freeing it's dynamic string.
59 0059 1 | Add support for new data types and dynamically mapped arrays.
60 0060 1 | PLL 3-Mar-1982
61 0061 1 | 1-010 - Add support for decimal arrays. PLL 15-Mar-1982
62 0062 1 | 1-011 - Correct arguments in CVTPL, CVTLP. PLL 14-Apr-1982
63 0063 1 | 1-012 - CVTPL should set scale to 0 and let FEETCH_BFA do the scaling.
64 0064 1 | PLL 16-Apr-82
65 0065 1 | 1-013 - Clean up comments, etc from last edit. PLL 21-Apr-82
66 0066 1 | 1-014 - Add support for multiply dimensioned arrays. PLL 24-May-82
67 0067 1 | 1-015 - Fix bug in changing from string to integer arrays. PLL 9-Jul-1982
68 0068 1 | 1-016 - Fix bug in changing from integer to string. PLL 26-Jul-1982
69 0069 1 | 1-017 - Changing a string to a byte or word array does not store the value
70 0070 1 | in the proper location. Fix STORE. PLL 13-Sep-1982
71 0071 1 | 1-018 - Fix code which calculates the length for a virtual packed decimal
72 0072 1 | array element. (Must be power of 2.) Also correct conversion
73 0073 1 | of long to packed and vice versa. Long must be converted to 10
74 0074 1 | digit packed with 0 scale, and then to desired length and scale.
75 0075 1 | While fixing miscellaneous bugs, also add some code to make
76 0076 1 | dynamically mapped arrays work properly. PLL 22-Sep-1982
77 0077 1 | 1-019 - remove restriction of 255-byte destination character strings.
78 0078 1 | dynamically allocate destination string based on length needed.
79 0079 1 | MDL 14-Jun-1983
80 0080 1 | 1-020 - Fixed: 1. if the string is longer than the numeric array, element 0
81 0081 1 | of the numeric array contains the string's length.
82 0082 1 | 2. if string length > 255 and CHANGEing to byte array,
83 0083 1 | integer error is signalled. DG 4-Jan-1984
84 0084 1 | 1-021 - Dynamic remapped decimal arrays no longer get 'Data type error'.
85 0085 1 | At the same time, fixed the array length calculations for data
86 0086 1 | types longer than 1 longword. DG 9-Jan-1984

176 0546 1 ++
177 0547 1 FUNCTIONAL DESCRIPTION:
178 0548 1
179 0549 1     Change the list of numbers to a string. The first number is
180 0550 1     the length of the string.
181 0551 1
182 0552 1 FORMAL PARAMETERS:
183 0553 1
184 0554 1     LIST_DESC.rx.d The list of numbers. This may be word,
185 0555 1     longword, floating or double. It may be single-
186 0556 1     or double-dimensioned.
187 0557 1     STR_RESULT.wt.d The descriptor for the string result. It may
188 0558 1     be dynamic or static.
189 0559 1
190 0560 1 IMPLICIT INPUTS:

) : NOVALUE =

! Store string elements into array
! Where to find the string
! The array to store it in

**
FUNCTIONAL DESCRIPTION:
    Store string elements into an array. The array will be numeric.
FORMAL PARAMETERS:
    STR_DESC.rx.dx The place from which to get the string values
    DESCRIP.rx.da  The descriptor of the array or virtual array
IMPLICIT INPUTS:
    NONE
IMPLICIT OUTPUTS:
    NONE
ROUTINE VALUE:
COMPLETION CODES:
    NONE
SIDE EFFECTS:
    Signals if an error is encountered.
